Production Grid and Project Costing

improveit 360

Agenda

- Use Project Templates to streamline Production processes
 - Use *Days until Next Activity* to anticipate project timelines
- Apply a Project Templates to every Project
- Use the Production Grid
 - Admin Users can Add fields to the Production Grid
- Project and Project Activity List Views to organize similar tasks
- Tracking Job Costing in improveit 360
 - Track estimated versus actual Project Costs
- Common Project Reports (if there is time)

Note: To Filter Projects by a specific Date from an individual Project Activity, that Date would need to be captured somewhere on the Project itself. Improveit 360 can configure an automation to auto-populate those Dates as a paid service.

Project lists should group like Projects together.

Examples:

- Active Roofing Projects
- Projects with a Balance Due
- “Bob” is the Project Manager

If you use Staff-specific List Views and a new person starts working for you, you will need to build a new list for them!

Every business using improveit 360 names their Project Activity steps uniquely. You will want to create List Views to track the steps in your specific Production Process.

Note: **Predecessor Activity** is the Step immediately before this one in the Template. **Predecessor Status** tells you if that Step has been Completed or not. In the screen shot above the Darah Windows project hasn't received Materials yet and we see this information in the Predecessor fields.

Project Activity Lists con't

Set Filter Conditions & when to use Predecessor Status

Filter By Additional Fields (Optional):

Field	Operator	Value	
Project Activity Name	contains	Install	AND
Project Status	equals	Active	AND
Type	equals	Appointment	AND
Completed	equals		AND
Start	not equal to		

Project Activity lists should Filter down to capture specific Production Steps which require the same type of Action, examples:

- Installs Pending Completion
- Orders to Receive
- Utilities need Marked

Filter By Additional Fields (Optional):

Field	Operator	Value	
Project Activity Name	contains	Receive	AND
Completed	equals		AND
Project Status	not equal to	Canceled, Completed	AND
Predecessor Status	equals	Completed	AND
--None--	--None--		

Note: **Predecessor Status** equals Completed as a Filter ensures that you will not see Projects where the Step preceding has not been Completed. This may be appropriate for some lists and not others.

Example: If the step preceding the Installation is a Confirmation Call to the Prospect 24 Hours prior, we do not want to exclude Installs from our list of "Installs Pending Completion" just because the Confirmation Call was never completed. By contrast, in an "Orders to Receive" list the step preceding was the "Order materials" step. If the Materials were never Ordered, you would not want that Receive step to show up in the List of Projects we're anticipating to receive materials for.
